

## Bio-Strath's quality policy

The Bio-Strath Company is committed to quality of design and quality of manufacture for all its health care products.

Bio-Strath elixir and tablets were developed over 40 years ago and have been extensively researched to prove their safety and efficacy – *quality of design*.

**Quality of manufacture** is a continuous discipline starting with every ingredient and component that goes into the product and continues through the entire manufacturing and packaging stages to ensure consumers purchase a product that is fit for purpose.

All Bio-Strath products are made at a purpose built factory close by Lake Zurich and is regularly inspected by Swissmedic, the government agency responsible for licensing therapeutic products in Switzerland and ensuring the principles of good manufacturing practice are adhered to. The requirements regarding manufacture and quality control for products exported are identical to those applied to the products sold in Switzerland.

All the herbal ingredients are purchased from specialist suppliers and conform to European Pharmacopoeia or German Commission E specifications of identity and purity. These suppliers are audited on a regular basis and give guarantees that their materials are free from pesticide residues, heavy metal contaminants and microbiological pathogens.

Quality tests are performed regularly throughout the production process on every batch using state of the art laboratory instruments. All the processes are fully documented making it possible to trace the complete history of every batch – the origin of every component, amounts used and when, the personnel involved and the results of every test carried out. A retention sample from every batch of raw material and the finished product itself is stored in controlled conditions should future reference be necessary.

All Bio-Strath products are free from artificial colours and preservatives.

Bio-Strath is a family owned company, founded by Mr Fred Pestalozzi in 1961. The Bio-Strath herbal yeast food supplements are produced during a two months process. The products are exported in more than 50 countries worldwide.
