CERTIFICATE OF ORIGIN AND MANUFACTURE

10-24-2006

Name of Products: ImmunoPro® , RenewPro® Whey Protein Concentrate
Products of the United States of America.

Manufacturing:

Stage One: Separation of the liquid whey from the curds of bovine milk.

Stage Two: Proprietary filtration of the liquid whey

Stage Three: Proprietary pasteurization and drying of the liquid whey.

Finished product is in a powder form.

RenewPro has a sweetener added. It is a 100% pure dried fruit concentrate
named Lo Han Guo. It is low-glycemic and has GRAS status in the USA.

Expiration Date: 24 months from the manufactured date.

*There is no rBGH, rBST or hormone treatment with our cows or in our whey protein products ImmunoPro®, RenewPro®, or our Bioactive Colostrum™ .

The Facts on Dairy Hormone Treatment:

The use of rBGH / rBST, common hormone treatment in milk cows, is an issue to be reckoned with. The United States is the main country where it is legal. The educated consumer is questioning the use of hormones and is becoming aware that this may not be a natural or safe way to produce milk. The use of GMO feeds is also a major concern.

Contrary to common thought, there are several different hormones given to cows in a conventional dairy. Lutalys (Prostaglandin F2d) is used to bring a cow into heat (able to be impregnated), GnRH is given to treat cystic ovarian disease in higher producing cows and Oxytocin to stimulate milk let-down. rBGH (recombinant Bovine Growth Hormone), is a genetically non-engineered (GE) potent variant of the natural growth hormone produced by cows. Manufactured by Monsanto, it is in use on US cows and utilized to increase milk production. The use of hormones and GMO feed is legal in conventional dairies. Neither the State nor Federal government does testing for hormones.

So the truth is, it is very profitable for any dairy farmer with more than 100 cows to use these milk-producing hormones. With one hormone injection per month there is a 15% increase in milk production with no other expenditures. That 15% increase in production equates to raising the dairies net profit three fold. A conventional whey product cannot honestly claim to be Hormone Treatment free or GMO feed free unless they have complete control over the treatment of the cows.

The reality is hormone treatment and GMO feed is legal in the US. It cannot be detected and a high percentage of the dairies in all states use hormones and it is kept quiet. The manufacturers of cheese and whey downplay its use because they pool milk from many conventional farms and cannot verify treatment. The FDA sanctions its use even though the consumer questions it.

*The milk, for all of our exclusive milk protein products, is derived from herds that graze year round on disease-free, pesticide-free, chemical free, natural grass pastures. The milking cows are not subject to any chemicals, hormones, antibiotics, genetically modified organisms, hyperimmunization or injected pathogens. There is no history of bovine disease with our milk cows or dairy. The cows have never been fed any cannibalistic by-products. I trust this will help you see the bigger picture on milk and why Wellwisdom is committed to producing the finest quality nutritional proteins.

MANUFACTURING COMPLIANCE CERTIFICATE

1-5-2007

Periodic comprehensive audits are conducted by both the US Food and Drug Administration (FDA) and the state of California at the location where all Wellwisdom, LLC products are produced.

The facility and production techniques which produce the ImmunoPro® , RenewPro®, GlutImmune™ and Bioactive Colostrum products are in full compliance with all c-GMP (current good manufacturing practices) guidelines for foods, as specified in the US Code of Federal Regulations 21 CFR 110 - Current Good Manufacturing Practice in Manufacturing, Packaging, or Holding Human Food.
